

Today we will learn:

1. How to create job in jenkins
2. How to add robot framework plugin in jenkins
3. How to configure robot framework tests in Jenkins
4. Show html reports on jenkins
5. Run and Validate

Useful TIPS

---

Step 1 : Download Jenkins

Step 2 : Start Jenkins

Step 3 : Add robot framework plugin in jenkins

Step 4 : Create job to run robot framework tests

Step 5 : Run and validate

In case not able to see the html reports in jenkins

Goto Manage Jenkins – Script Console

Add this script and run

```
System.setProperty("hudson.model.DirectoryBrowserSupport.CSP", "")
```

If you see Result, it means success

Now from next runs html reports will be accessible from jenkins

---

Useful Tips

Goto Dashboard – You will find a new column Robot Results

You can use wild cards in name of output files of robot framework in Jenkins

Jenkins content security policy – to enable viewing html reports
